A quadruped belonging to the digitigrade carnivora, family *Canidae*, in habits a physical development closely related to the dog, some naturalists, indeed, considering it as the progenitor of some existing races of the dog, with which it has been known to interbreed. The common European wolf (*Canis lupus*) is yellowish or fulvous gray, the hair is harsh and strong, the ears erect and pointed, the tail straight, or nearly so, and there is a blackish band or streak on the forelegs about the carpus. the shoulder is from 27 to 29 inches. The wolf is swift of foot, crafty, and rapacious; a destructive enemy to the sheep-cote and farm-yard; it associates in packs to hunt the larger quadrupeds, such as the deer, the elk, &c. When hard pressed with hunger these packs have been known to attack isolated travellers, and even to enter villages and carry off children. In general, however, wolves are cowardly and stealthy, approaching the sheepfolds and farmsteads only at dead of night, making a rapid retreat if in the least scared by a dog or a man, and exhibiting great cunning in the avoidance of traps. Wolves are still plentiful in some parts of Europe, as France, Spain, Italy, Germany, Turkey, and Russia; they probably ceased to exist in England about the end of the fifteenth century; the last of their race in Scotland is said to have been killed by Cameron of Lochiel in 1680, while in Ireland they are known to have existed until at least the beginning of the eighteenth century. The black wolf (*C. occidentalis*) of America is a larger and finer animal than his European congener. The little prairie-wolf or coyote (*C. ochropus*), abounding on the vast plains of Missouri and Mexico, is a burrowing animal, and resembles in many respects the jackal. The

Wolf, the great German philologist.—**Wolfian theory**, a theory put out by Wolf in 1795 to the effect that the *Iliad* and *Odyssey* cannot be the works of one man, Homer, because writing was unknown at the time that these poems are said to have been composed. He supposes, therefore, that the *Iliad* and *Odyssey* consist of ballads or episodes, the work of different men, collected and arranged in a more or less consistent and homogeneous whole in the sixth century B.C. These ballads were preserved by the recitation of strolling minstrels.

It is a native of alpine pastures in Switzerland and other mountainous parts of Europe. It is a common plant in flower borders, and is found in a wild state in one or two parts of England. All the parts of the plant, espe-

cially the roots, are very poisonous, containing a narcotic alkaloid called *aconitin* or *aconitine*, one of the most virulent of all known poisons. The juice of the leaves introduced into the stomach is said to occasion death in a short time, but the powdered root is far more energetic. Wool (wúl), *n.* [A. Sax. *wull*, *wul*, D. *wol*, G. *wolle*, Goth. *wulla*, Icel. and Sw. *ull*, Dan. *uld* (these latter forms having lost the initial consonant). Cog. Lith. and Lett. *vilna*, Rus. *volna*, Skr. *árud*, wool. Allied to L. *villus*, shaggy hair, *vellus*, a fleece, Gr. (*verion*, wool; traced to a root signifying to cover, to protect, and supposed to be seen also in L. *vallis*, a valley, and in *valco*, to be strong. See **VALID**.) 1. That soft species of hair which grows on sheep and some other animals, as the alpaca, some species of goats, &c., which in fineness sometimes approaches to fur. The word generally signifies the fleecy coat of the sheep, which constitutes a most essential material of clothing in all cold and temperate climates. Wool is divided into two classes—*short or carding wool*, seldom reaching over a length of 3 or 4 inches, and *long or combing wool*, varying in length from 4 to 8 inches, each class being subdivided into a variety of sorts, according to their fineness and soundness of the staple. The finest wools are of short staple, and the coarser wools usually of long staple. Wools which unite a high degree of fineness and softness, with considerable length of staple, bear a high price. English-bred sheep produce a good, strong, combing wool, that of the Scotch breeds being somewhat harsher and coarser. The finest carding wools were formerly exclusively obtained from Spain, the native country of the merino sheep, and at a later period extensively from Germany, where that breed had been successfully introduced and cultivated. Immense flocks of merinos are now reared in Australia, South America, and South Africa, and from these quarters Britain now obtains her chief supply.—2. Under the old poor-laws of England, there was a workhouse in each parish, partaking of the character of a bridewell, where indigent, vagrant, and idle people were set to work, and supplied with food and clothing, or what is termed *indoor relief*. Some were used as places of confinement for rogues and vagabonds, who were there confined and compelled to labour; whilst others were large almshouses for the maintenance and support of the indigent. Previous to the passing of the Poor-law Amendment Act in 1834, these workhouses were described as, generally speaking, nurseries of idleness, ignorance, and vice. By the act alluded to parishes were united for the better management of workhouses, which gave rise to the poor-law unions with their workhouses, capable of containing from 100 to 500 inmates. In these establishments a suitable classification of the pauper inmates has been effected, and proper government and discipline instituted. The paupers of the several classes are kept employed according to their capacity and ability. Religious and secular instruction is supplied, habits of industry, cleanliness, and order are enforced; and wholesome food and sufficient clothing are furnished.

But 'worship' or 'worshipship' meant 'honour' in our early English, and 'to worship' to honour, this meaning of *worship* still very harmlessly surviving in the title of 'your worship,' addressed to the magistrate on the bench. So little was it restricted of old to the honour which man is bound to pay to God, that it was employed by Wiclif to express the honour which God will render to his faithful servants and friends. Thus, our Lord's declaration, 'If any man serve me, him will my Father honour,' in Wiclif's translation reads thus, 'If any man serve me, my Father shall worship him.'

not easily be otherwise represented. As an initial it occurs in a few words borrowed from the Greek, never standing in this position in words that are properly English in origin.—As a numeral X stands for ten. It represents one V, which stands for five, placed above another, the lower one being inverted. When laid horizontally, thus X, it stands for a thousand, and with a dash over it, thus X̄, it stands for ten thousand.

X, the twenty-fourth letter of the English alphabet, was borrowed by the Romans in comparatively late times from the Greeks, and passed from the Roman into the Anglo-Saxon alphabet. The Greek X, however, was a guttural, probably like the Scotch or German ch, and why in Latin it should have assumed the functions of the Greek character H (= x) is not very clear. Except when used at the beginning of a word, x in English

is a double consonant (as it was in Latin and Greek), and has usually the sound of ks, as in *vax*, *lax*, *axis*, &c.; but when terminating a syllable, especially an initial syllable, if the syllable following it is open or accented, it often takes the sound of gz, as in *luxury*, *exhaust*, *exalt*, *exotic*, &c. At the beginning of a word it has precisely the sound of z. Hence it is entirely a superfluous letter, representing no sound that could

Y.

Y, the twenty-fifth letter of the English alphabet, was taken from the Latin, the Latin having borrowed it from the Greek *Υ* or *upsilon*. In the Anglo-Saxon alphabet it was always a vowel, and is believed to have had a sound resembling that of French *u* or German *ü*, this being also the sound which the Greek *Υ* is believed to have had. In modern English it is both a consonant and a vowel, and seldom or never is the historical representative of A. Sax. *y*, this being usually represented by *i*. At the beginning of syllables and followed by a vowel it is a consonant of the palatal class, being formed by bringing the middle of the tongue in contact with the palate, and nearly in the position to which the *g* hard brings it. Hence it has happened that in a great number of words *g* has been softened into *y*, as A. Sax. *gedr* into *year*, *geornian* into *yearn*, *dag* into *day*. As an adjective termination it commonly represents A. Sax. *-ig*, as in *stony* = A. Sax. *stānig*, *greedy* = A. Sax. *grædig*, *hungry* = A. Sax. *hungrig*, *many* = A. Sax. *menig*. In some nouns it also represents the term *-ig*, as in *honey* = A. Sax. *hunig*, *whisky* = A. Sax. *whithig*. In the term *-ly* it stands for *ic* or *ice*, as in *godly* = A. Sax. *godlic*, *friendly* = A. Sax. *freondlic*, *fully* = A. Sax. *fullice*, *hardly* = A. Sax. *heardlice*, &c. In words of Romance origin the term *-y* often represents Fr. *-ie*, L. *-ia*, as in *history*, *modesty*, *memory*, *victory*; it also represents

L. *-ium*, the noun termination, as in *study*, *remedy*, *subsidy*, &c., or the adjective term. *-ius*, as in *notary*, *contrary*, *secondary*, &c. In nouns ending in *-ty* the *-ty* represents Fr. *-té*, L. *-tas*, *-latis*, as in *vanity*, *calamity*, &c. In the middle and at the end of words *y* is a vowel, and is precisely the same as *i*. It is sounded as *i* long, when accented, as in *defy*, *rely*, *dying*; and as *i* short when unaccented, as in *vanity*, *glory*, *synonymous*. As a consonant this letter bears much the same relation to *i* (short) as *w* does to *u*; thus *i* short has in certain positions—as in the *ia* of *Christian*—a tendency to pass into *y*. *Y* is sometimes called the Pythagorean letter, from its Greek original representing, by means of its three limbs, the sacred triad, formed by the duad proceeding from the monad.—In chem. *Y* is the symbol of yttrium.—*Y*, as a numeral, stands for 160, and with a dash over it, *Ȳ*, for 150,000.

Y- A common prefix in Old English words, as in *y-clept*, *y-clad*, &c., representing A. Sax. *ge-*, which assumed this form by the common weakening of *g* to *y*. The meaning of words with this prefix is usually the same as if it were absent. See **GE**.

There are two distinct species of yacht: the mere racer with enormous spars and sails and deeply-ballasted hull, with fine lines, but sacrificing everything to speed; and the elegant, commodious, well-proportioned travelling yacht, often with steam-propelling machinery, fit for a voyage round the world. The yacht navy of Britain comprehends vessels from 3 to about 600 tons.

There are several varieties of the yak due to climatic influences, character of habitat, food, and, in the case of domesticated animals, to the kind of work to which they are put, as the *noble yak*, the *ghainorik*, the *plough-yak*. The last is a plebeian-looking animal, and wants the magnificent side tufts of hair characteristic of its free brethren. It is employed in agriculture. The yak is often crossed with other domestic cattle, and a mixed breed obtained. The tail of the yak is in great request for various ornamental purposes, and forms quite an important article of commerce. Dyed red it decorates the caps of the Chinese, and when properly mounted it is used as a fly-flapper in India under the name of a chowry.

The most common explanation seems also the most plausible, namely, that it is a corrupt pronunciation of *English* or of Fr. *Anglais* formerly current among the American Indians. In Bartlett's *Dictionary of Americanisms* a statement is quoted to the effect that *Yengees* or *Yenkees* was a name originally given by the Massachusetts Indians to the English colonists, and that it was afterwards adopted by the Dutch on the Hudson, who applied the term in contempt to all the people of New England. Bartlett also quotes a statement of Heckwelder (an authority on Indian matters), who affirmed that the Indians applied the term *Yengees* specially to the New Englanders as contradistinguished from the Virginians or Long Knives, and the English proper or Saggeneash. As early as 1713 it is said to have been a common cant word at Cambridge, Mass., in the sense of good or excellent, being probably borrowed by the students from the Indians, to whom a 'Yankee' article would be synonymous with an excellent one, from the superiority of the white man in mechanical arts.] A cant name for a citizen of New England. During the American Revolution the name was applied to all the insurgents; and during the civil war it was the common designation of the Federal soldiers by the Confederates. In Britain the term is sometimes applied generally to all natives of the United States.

Yankee-Doodle (yang-ké-dó'dl), *n.* 1. A famous air, now regarded as American and national. In reality the air is an old English one, called *Nankey Doodle*, and had some derivative reference to Cromwell. It is said that the brigade under Lord Percy, after the battle of Lexington, marched out of Boston playing this tune in derision and punning allusion to the name Yankee, and the New Englanders adopted the air in consideration of the fact that they had made the British dance to it. See *YOU*.] Properly the nominative plural of the second person, of which *thou* is the singular, but in later times also used as an objective after verbs and prepositions. *Ye* is now used only in the sacred and solemn style; in common discourse and writing *you* is exclusively used.

But *ye* are washed, but *ye* are sanctified. 1 Cor. vi. 11.

Loving offenders thus I will excuse *ye*. *Shak.*

I thank *ye*; and be best for your good comfort. *Shak.*

Ye, *adv.* Yes; *yea*. *Chaucer*.

Yea (yā), *adv.* [A. Sax. *ge*, *yea*, indeed; Icel. *jā*, D. Dan. Sw. and G. *ja*, Goth. *ja*; allied to Goth. *jah*, and; L. *jam*, now; Skr. *ya*, who.] 1. Yes; *ay*: a word that expresses affirmation or assent: the opposite of *no*; as, will you go? *yea*. 'Whilst one says only *yea*, and t'other *nay*.' *Denham*. (b) An affirmative vote; one who votes in the affirmative; the equivalent to *Ay* or *Aye*. — *Yea* is now used only in the sacred and solemn style. *Yea* like *nay* was formerly

used only in answer to questions framed affirmatively in contradistinction to *yes* and *no*, which were the proper answers to questions put negatively. See *extract*.

There is an example of the rejection of a needless subtlety in the case of our affirmative particles, *yes* and *yea*, *may* and *no*, which were formerly distinguished in use, as the two affirmatives still are in our sister-tongues, the Danish and Swedish. The distinction was that *yes* and *may* were answers to questions framed in the affirmative; as, Will he go? *Yes* or *May*. But if the question was framed in the negative, Will he not go? the answer was *Yes* or *No*.

Skeat regards the word in meaning 2 (the only meaning found in Shakespeare) as quite different, taking it from O. E. *ernie*, to grieve, from A. Sax. *yrman*, to grieve, to vex, from *earm*, poor, wretched (D. *arm*, Sw. and G. *arm*, Icel. *armr*, Goth. *armr*). If this is correct the word has evidently been influenced in its form by confusion with *yearn*, to desire.] 1. Yeast (*yést*), n. [O. E. *yeast*, A. Sax. *giest*, *giest*, Icel. *giest*, *giest*, D. *giest*, *giest*, M. H. G. *giest*, *giest*, Mod. G. *giest*, *giest*, from a verb signifying to ferment, seen in O. H. G. *gean*, *gean*, Mod. G. *gähren*, *gähren*, Sw. *geas*, to ferment, to froth. Allied to Gr. *zeó*, to boil, *zeion*, E. *zeal*.] 1. Barm; ferment; the yellowish substance, having an acid reaction, produced during the vinous fermentation of saccharine fluids, rising partly to the surface in the form of a frothy, flocculent, viscid matter (*surface yeast*), and partly falling to the bottom (*sediment yeast*). Yeast consists of aggregations of minute cells, each cell containing a plant, *Torula cerevisiae*. The yeast-plant is a fungus, or rather a particular state of fungus, for there are many moulds which, under certain conditions, acquire the *torula* property, that is, become capable of decomposing sugar. The cell consists of a cyst composed of cellulose, inclosing a semi-fluid matter, essentially identical with protein. When a surface yeast-cell has attained full size, it gives off a little bud, which, on attaining the size of

the first, gives out another bud, and in this way the cells undergo exceedingly rapid multiplication. The germs of the yeast-plant are supposed to exist in countless multitudes in the atmosphere, from the fact that a saccharine solution which presents no surface to the atmosphere does not ferment, while on its being so exposed fermentation sets in. Fermentation takes place sooner and goes on more rapidly when yeast is added than when the fluid is merely exposed to the atmosphere, beer yeast possessing the property of setting up fermentation in the highest degree. Surface yeast is formed at 65° to 77° Fahr., and its action is rapid and irregular, whereas sediment yeast is formed at 33° to 45°, and its action is slow and quiet. Sediment yeast is reproduced by spores and not by buds. In their chemical relations the two do not appear to differ. Yeast varies in quality according to the nature of the liquid in which it is generated, and yeast merchants distinguish several varieties, which are employed for different purposes according to their energy and activity. Yeast is not only essential to the production of wine from grape juice and other fruit juices, the manufacture of beer, and the preparation of distilled spirits, but it is also the agent in producing the panary fermentation whereby bread is rendered light, porous, and spongy. Beer yeast is employed medicinally as a stimulant in low fevers, and is of great service in cases where, from inflammatory symptoms, wine is inadmissible. — *German yeast*, common yeast collected, drained, and pressed till nearly dry. It can be so kept for several months, and is much used by bakers. — *Patent yeast*, yeast collected from a wort of malt and hop, and treated similarly to German yeast. — *Artificial yeast*, a dough of flour and a small quantity of common yeast made into small cakes and dried. Kept free from moisture, it long retains its fermentative property. — 2. Spume or foam of water; froth.

They melt into thy *yeast* of waves, which mar
Alike the Armada's pride, or spoils of Trafalgar. *Byron*.

Formerly spelled *Yest*. 'Now the ship boring the moon with her mainmast, and anon swallowed with *yeast* and froth.' *Shak*.

nat. order or sub-order Taxaceae. The common yew is *T. baccata*, indigenous in most parts of Europe, and found in many parts of Great Britain and Ireland. It is a low tree, usually rising 3 or 4 feet from the ground, and then sending out numerous spreading branches, forming a dense head of foliage often 30 to 40 feet high. On account of its gloomy and funereal aspect it was very frequently planted in churchyards, and is thus associated by our poets with death, the grave, bereavement, gloom, and the like. Its wood was extensively used in the manufacture of bows previous to the discovery of gunpowder, and the name has by several writers been used as synonymous with bow, much in the same way as *steel* for sword. 'With his yew and ready quiver.' *Sylvestor*.

At first the brandished arm the javelin threw,
Or sent winged arrows from the twanging yew. *Gay*.

In our own days, on account of the durability of the timber, and of its hard, compact, close grain, it is much employed by cabinet-makers and turners. The American yew (*T. canadensis*) is a low prostrate shrub, never forming an erect trunk. It is found in Canada and the more northern of the United States, and is commonly called *Ground-hemlock*.

Z.

Z, the last letter of the English alphabet, is a sibilant consonant, and is merely a vocal or sonant *S*, having precisely the same sound that *s* has in *wise*, *ease*, *please*, &c. (See *S*.) It did not have a place in the Anglo-Saxon alphabet, though no doubt it had sometimes this sound. In old English of the fourteenth century it was common, and in some writings was often used where we now have *s*. The words in modern English which begin with *z* are all derived from other languages, mostly from the Greek. The case was the same in Latin, in which this letter was never really naturalized. When not initial, however, the case is different, and we often find it representing an older *s* in genuine English words, as in *blaze*, *freeze*, *gaze*, *graze*, *guzzle*, *hazard*, *size*, &c. As a final it occurs in some onomatopoeic words, as in *buzz*, *whizz*. In German *z* is very common, being

a double consonant, with the sound *ts*. In Greek it was also a double consonant—*ds* or *zd*. In Britain its name is *zed*, in America *zed* and *zee*.

They consist of trees with a cylindrical trunk, increasing by the development of a single terminal bud, and covered by the scaly bases of the leaves. The stems of all the zamias abound in a mucilaginous juice, which has a nauseous odour and an unpleasant taste, arising from the existence in it of a peculiar proximate principle. This may be removed by boiling, roasting, &c., when some of them form a nutritious article of food. *Caffer-bread* is a common name for the genus in South Africa, where the central part of the stem pith of *Z. cycadis*, after being prepared in a particular way, is formed into cakes, baked, and eaten by the natives. southern Africa, nearly as large as a horse, white, striped with numerous brownish-black bands on the head, trunk, and legs, except on the belly and inside of the thighs.

Zebra (*Equus zebra*).

The zebras graze in herds on the steep hillside, and seek the wildest and most sequestered spots, so that they are extremely difficult of approach, not only from their watchful habits and great swiftness of foot, but also from the inaccessible nature of their abodes. The zebra is one of the handsomest, and also one of the wildest and least tractable of animals. Only in a few instances has it been domesticated, for it always retains its vicious, obstinate, and fickle nature. The name zebra is sometimes applied to the quagga and the dauw or Burchell's zebra; but they differ from the zebra in having no stripes on the lower limbs, while those on the body are not so black as the true zebra. The zebra is said to be becoming nearly extinct. See *DAUW*, *QUAGGA*.

Zinc (zingk), n. [Fr. *zinc*, G. *Sw.* and *Dan.* *zink*; allied to *O. zinn*, tin.] Sym. Zn. At. wt. 65. A metal frequently called *spelter* in commerce. It has a strong metallic lustre and a bluish-white colour. Its texture is lamellated and crystalline, and its specific gravity about 7. It is a hard metal, being acted on by the file with difficulty, and its toughness is such as to require considerable force to break it when the mass is large. At low or high degrees of heat it is brittle, but between 250° and 300° F. it is both malleable and ductile, and may be rolled or hammered into sheets of considerable thinness and drawn into wire. Its malleability is considerably diminished by the impurities which the zinc of commerce contains. It fuses at 773° F., and when slowly cooled crystallizes in four- or six-sided prisms. Zinc undergoes little change by the action of air and moisture. When fused in open vessels it absorbs oxygen and forms the

white oxide called *flowers of zinc*. Heated strongly in air it takes fire and burns with a beautiful white light, forming oxide of zinc. Zinc is found in considerable abundance. It does not occur in the native state, but is obtained from its ores, which are chiefly the sulphide, or *zinc-blende*, and the carbonate or *calamine*. The oxide of zinc (ZnO) is a fine white powder insoluble in water, but very soluble in acids, which it neutralizes, being a very powerful base, of the same class as magnesia. It combines also with some of the alkalis. Zinc forms a series of compounds with organic radicles, such as zinc methyl, Zn(CH₃)₂, and zinc ethyl, Zn(C₂H₅)₂. Several of the salts of zinc are employed in medicine, as the sulphate or *white vitriol* (ZnSO₄), the chloride or *butter of zinc* (ZnCl₂), the acetate and the cyanide. Sheet-zinc is largely employed for lining water cisterns, baths, &c., for making spouts, pipes, for covering roofs, and several other architectural purposes. Plates of this metal are used as generators of electricity in voltaic batteries, &c.; they are also employed in the production of pictures, &c., in the style of woodcuts. (See ZINCOGRAPHY.) Zinc is much employed in the manufacture of brass and other alloys, and in preparing galvanized iron. See GALVANIZED.

Zircon, hyacinth, and zirconite are regarded as varieties of the same species. They are essentially silicates of zirconium, generally containing minute portions of iron. When pure it is a white powder. It forms salts with acids.—*Zirconia light*, an intensely brilliant light, differing from the oxyhydrogen or lime light only in that it is produced from zircon cones acted on by oxygen and a highly carburetted gas, in place of the less durable lime balls of the other process.

It is commonly obtained in the form of a black powder, but it is also known in the crystalline state, forming blackish-gray highly lustrous laminae, having a specific gravity of 4.15. Zirconium forms a chloride $ZrCl_4$, and an oxide ZrO_2 , commonly known as zirconia. It exists in a few rare minerals, notably in zircon or hyacinth, which is a silicate of zirconium. It appears to form a link between aluminium and silicon.

Five of the strings are stretched over a fretted keyboard, and are

used for playing the melody, the fingers of the left hand stopping the strings on the frets, the right-hand thumb armed with a metal ring, striking the strings. These strings, which are tuned in fifths, have a chromatic range from C in the second space of the bass staff to D on the sixth ledger-line above the treble. All the remaining strings, called the accompanying strings, are struck by the first three fingers of the right hand, and being unstopped produce only the single tone to which they are tuned. The instrument while being played rests on a table with the keyboard side nearest the performer. Tyrol seems to be the native country of this instrument.

An imaginary belt or zone in the heavens, extending about 8° on each side of the ecliptic. It is divided into twelve equal parts called signs. (See SIGN.) It was marked out by the ancients as distinct from the rest of the heavens because the apparent places of the sun, moon, and the planets known to them were always within it. This, however, is not true of all the newly discovered planets.—2. A girdle; a belt; a zone. [Rare and poetical.]

It consists of a cylinder, open at the top, with a series of slits in its circumference, through which a person applying his eye to them can see the interior. A series of pictures representing the different attitudes successively assumed by an object in performing any act from its beginning to its close, as by a horseman in leaping a gate, an acrobat performing a somersault, and the like, is arranged along the interior circumference. The instrument is then set in rapid motion, and the person looking through sees the horseman, &c., as if endowed with life and activity, performing the act proper to his character.

They were called respectively *littoral*, *circumlittoral*, *median*, *inframedian*, and *abyssal*. Zoology (zô-o-lô-jî), *n.* [From Gr. *zôon*, an animal, and *logos*, discourse.] That science which treats of the natural history of animals, or their structure, physiology, classification, habits, and distribution. The term 'natural history' has been frequently used as synonymous with zoology, but such a term is obviously of wider significance, and should be used to indicate the whole group of the natural sciences. Zoology is a branch of biological science, constituting, in fact, with its neighbour branch botany, the science of biology. Its study comprehends such branches as the *morphology* of ani-

mals, or the science of form or structure, which again includes *comparative anatomy*, by which we investigate external and internal appearances, the positions and relations of organs and parts; the *development of animals*, which treats of the various stages leading from the embryonic to the mature state; the *physiology of animals*, which includes the study of the functions of nutrition, reproduction, and of the nervous system; *classification* or *taxonomy*, which assigns to the various individuals their proper place in the scale of life. A new department has been added in recent times, sometimes called *etiology*, which investigates the origin and descent of animals, or treats of the evolutionary aspects of zoological science. Various systems of classification have been framed by zoologists. Linnaeus divided the animal kingdom into six classes, viz. *Mammalia*, *Birds*, *Fishes*, *Amphibia*, *Insects*, and *Worms* (Vermes). Cuvier proposed a more scientific arrangement. He divided the animal kingdom into four sub-kingdoms, viz. *Vertebrata*, *Mollusca*, *Articulata*, and *Radiata*. Recent classifications are more strictly based on morphological characters. Professor Huxley recognizes the following sub-kingdoms: *Vertebrata*, *Mollusca*, *Molluscoida*, *Calenterata*, *Annulosa*, *Annuloida*, *Infusoria*, and *Protozoa*. See these terms.

Electric, *a.* [add.]—*Electric lamp*, the contrivance in which the electric light is produced. See *Electric light* below.—*Electric light*, a brilliant light, the result of heat produced by the force of electricity either evoked by the chemical reaction of a metal and an acid, or generated by a magneto-electric or other machine. The *arc light* is produced when two carbon pencils are attached to the electrodes of a powerful magneto-electric machine or galvanic battery, and their points are brought together long enough to establish the electric current. If they are then separated to a small distance, varying according to the strength of the current, the current will continue to flow, leaping across from carbon to carbon, emitting a light of great intensity at the space between the points. The name *Voltaic* or *electric arc* is given to that portion where the current leaps across from point to point, the term *arc* being suggested by the curved form which the current here takes. The *incandescence light* is obtained by the incandescence, by means of electricity, of various substances, including carbon, in a vacuum. Many forms of apparatus are in use for producing the electric light, distinguished either by the form of the generating machine, the distribution of the current, or the kind of burner. In the Jablochhoff light, the burner consists of a pair of carbon spindles placed parallel to one another, with an insulating earthy substance between them. Its combustion may be roughly compared to that of an ordinary candle, where the

earthy substance takes the place of the wick. Other forms of the 'candle' burners are in use, such as the Lontin, the Jamin, &c. The Maxim, Edison, and Swan lights proceed from an incandescent filament of carbon in a more or less perfect vacuum.—*Electric machine*. [add.] Besides machines in which electricity is excited by friction, electric machines are now common in which an electric current is generated by the revolution near the poles of a magnet or magnets of one or more soft-iron cores surrounded by coils of wire, these machines being known distinctively as *magneto-electric machines*. A *dynamo-electric machine* is a machine of this kind, in which the induced currents are made to circulate round the soft-iron magnet which produced them, thus increasing its magnetization. This again produces a proportionate increase in the induced currents, and thus by a successive alternation of mutual actions very intense magnetization and very powerful currents are speedily obtained. There are many forms of these machines, such as Gramme's, Siemens', Wilde's, Brush's, &c., used extensively in electric lighting, and as a motor for machinery, electric railways, &c.—*Electric pendulum*, a form of electroscope consisting of a pith ball suspended by a non-conducting thread.—*Electric railway*, a railway on which electricity is the motor. Only short lines have as yet been constructed. On one of these the wheels of the carriages are set in motion by a dynamo-electric machine placed between them and below the floor. This machine is actuated by an electric current produced by another dynamo-electric machine, which is stationary and driven at a high rate of speed by a steam-engine. The current is conveyed by underground wires to the rails, and these being insulated, it reaches the carriage through them.

PRONOUNCING VOCABULARY OF GREEK, LATIN, SCRIPTURAL, AND OTHER ANCIENT NAMES.

RULES AND DIRECTIONS FOR PRONUNCIATION.

The pronunciation indicated in the following list is that usually heard from educated speakers of English, who as a rule do not attempt to pronounce Greek or Latin or Scriptural names in the way in which they were pronounced by the ancients themselves—if that could be with certainty determined—but rather seek to assimilate the pronunciation to that of their own language. There is therefore no great difficulty in the pronunciation of such words, and by attention to the following rules and directions any name in the list can be sounded correctly.

Special knowledge required for the right pronunciation of these words is—

1. The seat of accent; and
2. The sound to be given to the letters as they stand in the word.

The syllable of the word which is to receive the accent is denoted by the usual mark, an acute accent, placed immediately after it, as the first syllable of the word *Ca'to*, the second of the word *Cam-by'ses*, and the third of the word *San-cho-ni'a-thon*. The seat of the accent varies considerably in words of more than two syllables, though it is never on the last syllable; in dissyllables it is always on the first. The pronunciation of the latter, therefore, as also of monosyllabic words, after the following remarks are studied, will present no difficulty, and consequently many of them (especially those belonging to the classical languages) have been omitted from the list below. The division into separate syllables is denoted by the mark - as well as by the accentuation mark. Two vowels coming together in a word, but having one or other of these marks between them, must therefore always be pronounced as belonging to different syllables.

The sounds to be given to the several letters will be considered under two general heads, viz.: 1. The vowel letters; and 2. The consonant letters. It must always be borne in mind that silent letters, so common in English (*e* final for instance), are the exception in the words here treated of.

I. THE VOWEL LETTERS.

The vowels heard in the words *fate*, *me*, *pine*, *note*, and *tube*, are called long vowels; while those heard in the words *fat*, *met*, *pin*, *not*, and *us*, are called short vowels.

1. When any of the vowel letters *a*, *e*, *i*, *o*, and *u*, constitute an accented syllable, and also when they end one, they are pronounced as long vowels; thus, in the first syllable of the words *Ca'to*, *Pe'lops*, *Di'do*, *So'lon*, and *Ju'ba*, they are pronounced as in the respective key-words *fate*, *me*, *pine*, *note*, and *tube*.

2. When the vowel letters are followed by one or more consonants in a syllable, they are pronounced as short vowels; thus, in the first syllable of the words *Cae'sa*, *Hec'u-ba*, *Cin'na*, *Cor'du-ba*, and *Pub'li-us*, they are pronounced as in the respective key-words *fat*, *met*, *pin*, *not*, and *us*.

3. When the letter *a* constitutes an unaccented syllable, as in *A-by'dos*, and when it ends one, as in *Ju'ba*, it is pronounced as *a* in *fat*.

4. The so-called diphthongs *æ*, *œ*, are always pronounced as the *e* of *me*, and are therefore simple vowel sounds, as in *Cæ'sar*, *Pæ'stum*, *Æ'o-lus*, *Bœ'o-ti-a*.

5. The digraph *ai* in a syllable is pronounced like *ai* in *wait*. It occurs only in Scriptural names. The *ai* of Greek words was pronounced like common English affirmative *ay*, or much the same as *i* in *pine*; but by the common spelling

it is Latinized into *æ*. An *a* and an *i* coming together, but belonging to different syllables, will of course have either the accent or the mark - between them.

6. When *r* follows *a* in the same syllable, and is itself followed by a consonant, as in *Ar'go*, *Car-tha'go*, the *a* is pronounced as in *far*. In such a word as *Ar-a-dus* it is sounded as in *fat*.

7. The digraph *au*, as in *Clau'di-us*, *Au-fid'i-us*, is pronounced as *a* in *fall*. An *a* and a *u* coming together, however, may belong to different syllables, as in *Em-ma'us*.

8. When *e* constitutes an unaccented syllable, as in the first of the word *E-te'o-cles*, and when it ends one, as in *Evad'ne*, it is pronounced as *e* of *me*. And when *e* is followed by *s* as the final letter of a word, as in *Her'mes*, *Ar-is-top'h'a-neas*, it is always pronounced as *e* of *me*.

9. When *e* is followed by *r* in the same syllable, as in *Her'mes*, *Mer-cu'ri-us*, the *e* is pronounced as *e* of *her*. The letters *i*, *u*, and *y*, before *r*, have the same sound, as in *Vir'gil*, *Bur'sa*, *Cyr'nus*. When *er* is followed by a vowel, however, *e* is sounded as in *met*, thus *Er'a-to*, *Me'r'o-e*.

10. The digraph *ei*, as in *Plei'a-des*, is pronounced as *i* of *pine*. An *e* and *i* coming together, however, may belong to different syllables. Compare Rules 5 and 7.

11. The diphthong or digraph *eu*, as in *Leu-cip'pus*, *E-leu'sis*, *Ti-mo'theus*, is pronounced as *u* of *tube*. It occurs chiefly in Greek names. In other cases the *e* and *u* belong to separate syllables. Compare Rules 10 and 7.

12. When *i* constitutes the first and last syllables of words, whether accented or not, as in *I-be'ri-a*, *Fa'bi-i*, it is pronounced as *i* of *pine*. And *i* as the terminal vowel of a syllable at the end of words is also so pronounced, as in *Im'ri*, *A-ceph'a-li*.

13. But *i* at the end of any other unaccented syllable than the last, as in *Ind'i-a*, *Fa'bi-i*, is pronounced as *i* of *pin*.

14. In many cases *i* assumes the value of *y* consonant in English; thus *Aquileia* is pronounced as if *Aqui-le'ya*, *Caius* as if *Ca'yus*. This is especially common in the terminations of words.

15. *O* at the end of an unaccented syllable, as also when constituting an unaccented syllable by itself, is generally pronounced long or of medium length. Followed by *r* in the same syllable, as in *Gor'gus*, it is not usually pronounced long, but as *o* of *not*. The *o* in such a position is, however, by some speakers pronounced rather long than short, this being pretty much a matter of taste.

16. At the end of an unaccented syllable, or forming an unaccented syllable (as in *Æs'u-læ*, *A-bi'hu*), *u* is pronounced much the same as when accented, but shorter. Following *q* it is pronounced as *w*; thus the second syllable of *Epiculus* is pronounced exactly as the English word *quick*.

17. The letter *y* is pronounced as *i* would be in corresponding positions; thus the *y* in *Ty'a-na* is as *i* of *pine*; and the *y* in *Tyn'da-rus* as *i* of *pin*.

II.—THE CONSONANT LETTERS.

The consonant letters, *b*, *d*, *f*, *h*, *j*, *k*, *l*, *m*, *n*, *p*, *q*, *r*, *t*, *y*, and *z*, have each but one sound, and as that is the English sound, they present no difficulty. The letters *c*, *g*, *s*, *t*, and *x*, have each more than one sound, and hence require rules to pronounce them aright.

1. *C* and *g* are hard, or sounded as in *call* and *gun* respectively, when immediately followed by the vowel letters *a*, *o*, and *u*, either in the same or in the following syllable, as in *Cas'ca*, *Cor-ne'li-a*, *Cur'ti-us*, *Hec'a-te*, *Hec'u-ba*, *Gal'us*,

Gor'di-um, Au-gus'tus, Meg'a-ra, Teg'u-la. *C* and *g* are also hard immediately before other consonant letters, as in Clau'di-us, Cras'sus, Ec-bat'a-na, Hec'tor, Glau'cus, Gra'vi-us, Bag'ra-da, Bo-du-ag-na'tus.

2. *C* and *g* are soft when immediately followed by the vowel letters *e*, *i*, and *y*, either in the same or in the following syllable, as in Cer-be-rus, Cin'na, Cy-re'ne, Cic'e-ro, Tic'i-da, Gell'i-us, Gis'co, Gy'as, Vo-log'e-ses, Um-brig'i-us. In words such as Dacia, Sicyon, Phocion, Accius, Glaucia, Cap-pa-do'ci-a, the *ci* or *cy*, having the accent immediately before it, is often pronounced as *shi*: some authorities, however, retain the *s* sound in such words.

3. In Scriptural names, such as Megiddo, Gideon, *g* is always hard, except in the single word Bethphage. In consulting the list this will have to be kept in mind. The *s* following Scriptural names will serve as a guide.

4. When *c* and *g* are initial letters of a syllable, and immediately followed by *n* or by *t*, they are usually left silent in pronunciation; thus, Cneus is pronounced Ne'us; Gnidus, Nid'us; and Ctenos, Te'nos. Some scholars, however, pronounce the *c* and *g* in these combinations; and should the reader elect to do so, he must pronounce them hard.

5. In Scripture names *h* often follows a vowel in the same syllable; as in Micah, Isaiah, Calneh, the vowel in these cases being pronounced with its short sound and the *h* being mute. In Greek names *rh* is equivalent to simple *r*.

6. The digraph *ch* is pronounced as *k*, thus, Achilles is pronounced A-kil'les; Chios, Ki'os; Enoch, E'nok. The Scripture name Rachel is the single exception to this rule, *ch* in it being sounded as in *chain*.

7. *S* as an initial of words is pronounced as *s* of the word *son*, as in So'lon, Spar'ta, Styx. It is commonly so pronounced as an initial of other than the first syllable of words, as in Su'sa, Si-sen'na; but in some exceptional cases the *s* receives the sound of *z*, as in the word *Cæsar*, which is pronounced Cæ'zar. These exceptions will be denoted by the direction '*s* as *z*,' inclosed within parentheses, thus, Cæ'sar (*s* as *z*). See also rule 10.

8. *S* final of words, when preceded by *e*, is pronounced as *z*; thus Aristides is pronounced Ar-is-ti'dez. And the *e* so placed is that of the word *me* as remarked already. But when the final *s* is preceded by any other vowel, it is pronounced as *s* of *son*, as in Archytas, Amphipolis, Abydos, Adrastus.

9. *S* at the end of words, when preceded by a liquid, *l*, *m*, *n*, or *r*, is pronounced as *z*, as in Mars, which is pronounced Marz; Aruns, A'runz.

10. *Si* forming an unaccented syllable, preceded by an accented syllable with a final consonant, and followed by a vowel, is commonly pronounced *shi*; as in Al'si-um, Hor-ten'si-us. When the *si* is preceded by a vowel it is very commonly pronounced as *zi*, as in Mœ'si-a, He'si-od, A-le'si-a, Cœ'si-us; and sometimes as the *s* of *pleasure*, as in As-pa'si-a, The-o-do'si-a. But the usage in these cases is not very well settled, and some scholars carefully preserve the pure sound of the *s*, and do not even in such situations allow it to degenerate.

11. When *ti* followed by a vowel occurs next after the accented syllable of a word, it is pronounced as *th*; thus, Statius is pronounced Sta'shi-us; Helvetii, Hel-ve'shi-i; and similarly with Abantias, Actium, Maxentius, Laertius, &c. The proper sound of the *t* is preserved, however, when *ti* is accented or when it follows *s* or another *t*, as in Mil-ti'a-des, Sal-lus'ti-us, Brut'ti-i; so also in the termination -tion, as in A-e'ti-on. In such words as Domitius the *t* itself may be said to receive the *th* sound: Do-mish'i-us.

12. The digraph *th* is pronounced as *th* of the word *thia*, as in Tha-li'a.

13. *X* at the beginning of syllables is pronounced as *z*, thus, Xenophon is Zen'o-phon. But at the end of syllables it retains its voiceless sound of *ks*, thus Oxus is pronounced Oks'us. If, however, the *x* end a syllable which immediately precedes a vowel in the accented syllable, then the *x* receives its voiced sound, that of hard *g* followed by *z*, as in Alexarchus, which is pronounced Al-egz-ar'chus.

14. The letter *p*, when initial, and followed by *a* or by *t*, is not usually uttered, as in Pnigeus and Ptolemæus, which are pronounced Nigeus and Tol'e-mæ-us, though some persons sound the *p*.

15. *Ph* represents the Greek character φ, and is pronounced as *f*; thus, Philippi is pronounced Fi-lip pi. But when *ph* is followed by a consonant in the same syllable, as in Phthia, it is usually omitted in utterance, and the word is pronounced Thi'a. Some scholars, however, pronounce it.

16. *Ps* represents the Greek character ψ, which as an initial is pronounced as *s*, the *p* being generally omitted in utterance, as in Psyche, which is pronounced Sy'ke. Many scholars, however, now pronounce the *p* as well as the *s* of *ps*.

17. As a general rule, when any combinations of consonant letters which are difficult to utter occur at the initial part of words, the utterance of the first may be omitted, thus, Tmolus may be pronounced Mo'lus; Mnemosyne, Ne-mos'y-ne; while the digraph *ch* is dropped in Chthonia, making the pronunciation Tho'ni-a.

PRONOUNCING VOCABULARY

OF

MODERN GEOGRAPHICAL NAMES.

NOTES ON THE SPELLING AND PRONUNCIATION.

FOREIGN geographical names are spelled in English books either in the same manner as they are spelled in the language of the country to which they belong, or phonetically in accordance with the prevailing sounds of the letters of the English alphabet. The first method can, of course, be adopted only for names belonging to countries in which the Roman alphabet is used with or without diacritic marks. In the following notes on the pronunciation of foreign names the sounds indicated as those corresponding to the letters of foreign alphabets are explained, where necessary, by the key-line at the foot of the page.

In that key-line it will be seen that six signs are used to represent un-English sounds. These must be learned by the ear from those who are able to render them accurately, but it may be mentioned that the French sound heard long in *vê* and short in *bû* is like the sound of *u* in the Scotch word *abune*; that that heard long in *bleû* and short in *neûf* has some resemblance to the sound of *e* in *her*; that the sound represented by *ñ* (as in the French *on*) is produced by emitting voice through the mouth and nose at the same time, and is accordingly not a pure nasal (like the English *ng* in *sing*) but a semi-nasal; and that the *ch* in the German *nacht* is a strongly aspirated guttural like *ck* in the Scotch word *loch*. Strictly speaking two sounds are represented in German by *ch*, or by *g*, which is sometimes its equivalent. After the vowels *a*, *o*, *u* it is a guttural as in the Scotch *loch*, but after the other vowels and after consonants it is produced by the emission of breath between the point of the tongue and the fore-part of the palate.

Even with these signs for un-English sounds it must be remembered that the sound indicated for the letters of foreign alphabets is very often only an approximation to the true pronunciation, as foreign languages have a great many shades of sound which can be acquired only by those who have familiarized themselves with these languages as they are actually spoken by the people, and which, besides, no Englishman would ever think of trying to reproduce in pronouncing foreign names while reading or speaking English. It will be observed that, as the key shows, *y* is always used with its consonantal or semi-vowel sound as in *yes*. Thus when it is stated that the Hungarian *gy* has the sound of *dy*, it is to be understood that at the end of a word that combination does not form a separate syllable, but goes to form one syllable with the preceding letters. The Hungarian prefix *Nagy*, for example, is pronounced in one syllable *Nod-y*, the *d* being followed by the consonant *y* with an effect closely resembling that of a very soft *zh*.

A. Some rules for the pronunciation of languages using the Roman alphabet.

VOWELS AND VOWEL DIGRAPHS.

a is usually sounded *ä*, but sometimes long sometimes short. In Hungarian it is sometimes like *o* in *not*.
å in Swedish is sounded *ö*.
ä or *ae* is usually sounded like *ä* or *e*, in Flemish (and old Dutch) like *ä*.
ą in Polish is sounded like the French *on*.
aa in Danish is sounded as *ö*, in Dutch as *ä*.
ai and *ay* usually have each of the vowels sounded, the sound of *ä* being rapidly followed by that of *ë*. In

German they are sounded like *i* in *pine*, in French mostly like *ä*.

ão in Portuguese is sounded as *oun*.

au is usually pronounced either with the sounds of the vowels separately, or as a diphthong like *ou*. In French it is pronounced like *o* in *note*.

e is usually sounded like *ä* or *e* in *met*. In Spanish it always has the latter sound. Very often it has an obscure sound as in the English *golden*. In French it is often mute.

ę in Polish is sounded like the French *ain* (*añ*).

ě in Bohemian and Servian is sounded as *ye* or *yä*.

eau in French has the sound of *o* in *note*.

ei and *ey*, like *ai* and *ay*, usually have each of the vowels sounded separately, the sound of *ä* being rapidly followed by that of *ë*. In Dutch and German they have the sound of *i*. In French they are pronounced like *ä* or *e*.

eu is sounded in Dutch as in French, in German like *oi*, in other languages with the sounds of the vowels separately.

i is usually sounded like *ë*, or, when short, often like *i*.

ie in Dutch, German, and French is sounded like *ë* except where the letters belong to two syllables.

ij in Dutch has a sound like that of *i* in *pine*, but more open, that is, with less of the *ë*-sound at the close.

o is usually sounded like *ö* or *o*, in Danish and Norwegian sometimes like *ö*.

ö or *oe* is sounded in German, Danish, and Swedish like *eu* in French.

ø in Danish has a sound similar to *ö*, but somewhat closer.

ó in Polish is sounded like *o* in *more*.

oi is usually pronounced with the sounds of the separate vowels, in French it is like *wa* in *war*.

ou in French has the sound of *ö*, in Dutch and Norwegian that of *ou*.

u is usually sounded as *ö* or *u*; in French, as already mentioned, the sound is peculiar. In Danish, when short, it is sounded like *é*; in Dutch, when short and followed by a consonant in the same syllable, like *u*; when long, like *ü*; in Welsh, without an accent mark, like *i*.
ü or *ue* in German is sounded like *ü* or *ü*.
û in Welsh is sounded like *ë*.

ui in Dutch is pronounced like *oi* in *oil*.

y is usually sounded like *ë*; in Danish, Swedish, and Polish like the French *u*. In old Dutch it is used where the digraph *ij* is used in modern orthography. In Welsh, without an accent mark, it has the sound of *u*, except at the end of a word when it sounds like *i*.

ŷ in Welsh has the sound of *e* in *me* (like the Welsh *û*).

CONSONANTS AND CONSONANTAL DIGRAPHS.

Most of the consonants have the same sound in the languages of the European continent using the Roman alphabet as they have in English, but the following peculiarities are to be noted:—

b at the end of a word is often sounded in German like *p*. In Spanish it is pronounced with very feeble contact of the lips so as to be softened almost to a *v*-sound.

c before another consonant and before the vowels *a*, *o*, *u* is usually sounded like *k*; in French, Danish, Swedish, and Portuguese it is sounded in other situations like *s*, in Italian like *ch* in *chain*, in Spanish like *th* in *thin*,

Fâte, far, fat, fall; j, job;	mê, met, hêr, golden; TH, then; th, thin;	pîne, pln; zh, azure.	nôte, not, môve; French, vûe, bût;	tub, bull; bleû, neûf;	oil, pound; n, on.	ch, chain; German, ch, nacht.	g, go; g, go;
----------------------------------	--	--------------------------	---------------------------------------	---------------------------	-----------------------	----------------------------------	------------------

in German like *ts*. In Italian where another vowel follows *ci* (as well as *gi* or *sci*) the *i* is not sounded. In Spanish America *c* is usually pronounced as *s* in those cases in which in Spain it is pronounced *th*. In Bohemian and Polish it is always sounded like *ts*, and in Welsh always like *k*.

ç is used in French and Portuguese to indicate the *s*-sound of *c* before the vowels *a*, *o*, and *u*.

ch in Dutch, Polish, and Bohemian, as well as in German, has the sound of *ch*; in Italian it has the sound of *k*; in French (except in some words derived from the Greek, in which it is sounded like *k*) that of *sh*.

cs in Hungarian has the sound of *ch* in *chain*.

cz in Polish has the sound of *ch* in *chain*, in Hungarian that of *ts*.

d at the end of a word in German and Dutch is often sounded like *t*. In Spanish and Danish between two vowels, and after a vowel at the end of a word, it is softened to the sound of *th*, and in the latter language the same sound is given to it even when doubled. Strictly speaking the Spanish *d* is a dental *d*, being sounded by placing the tip of the tongue close to the lower edge of the upper front teeth. At the beginning of a sentence and when the *d* is preceded by another consonant, whether in the same word or another, the tongue is more firmly pressed against the teeth and a sound like that of the English *d* is produced, but in other cases the contact is so slight as to produce a sound almost exactly like that of *th*. At the end of words even this sound is almost inaudible. When *d* comes after *l*, *n*, *r* in Danish it is not sounded at all, and it is still more frequently silent in the Norwegian pronunciation of the language.

dd in Welsh has the sound of *th*.

dz in Polish is sounded like *dzy*.

g before a consonant and before the vowels *a*, *o*, and *u* mostly has the sound of *g* in *go*; and it has the same sound before other vowels also in German and Danish, and in all situations in Polish and Welsh. After a vowel it frequently has in German and Danish a guttural sound, and in the Norwegian pronunciation of the latter language it is often silent in that situation. In Dutch it is always a deep guttural, except in the combinations *gh* and *ng*, the former of which is pronounced like *g* in *go*, the latter like *ng* in *sing*. In French, Portuguese, Spanish, and Swedish it has the sound of the *j* of the same languages in all situations in which it has not the sound of *g* in *go*, and in Italian it is then sounded like our *j*. (See above under *c*.)

gh in Italian and Dutch has the sound of *g* in *go*.

gl in Italian has the sound of *ly*.

gn in French and Italian has the sound of *ny*.

gu in French always, and in Portuguese and Spanish before *e* and *i*, has the sound of *g* in *go*.

gy in Hungarian has the sound of *dy* or *dzh*.

h in French, Italian, Spanish, and Portuguese is silent or scarcely audible. In Spanish it is heard as a slight aspiration before the combination *ue*. In Danish it is not sounded before *j* and *v*.

j in most languages has the sound of *y*, in French and Portuguese that of *zh*, in Spanish that of *ch*. In Danish the sound of the Danish *j* (that is, the sound of the consonant *y*) is always interpolated after the consonants *k* and *g* before the vowels *æ*, *ö*, *ø*, *y*, and *i*. In Hungarian at the end of a syllable *j* has the sound of *e* in *me*.

k in Norwegian before *e*, *i*, *j*, *y*, and the modifications of *a* and *o*, is sounded like *ty*.

† represents in Polish a sound peculiar to that language and Russian. It is produced by attempting to sound an *l* with the point of the tongue directed further back in the palate than for the ordinary *l*, and with very slight contact between the tongue and palate.

lh in Portuguese has the sound of *ly* (Ital. *gl*).

ll in French in formal speech has the sound of *ly*, but colloquially is generally sounded like the consonant *y* without any *l*-sound. In Spain it always has the former sound, but in Mexico the latter is often substituted. In Welsh it has a peculiar sound, which is approximately rendered when one attempts to pronounce *tl* at the beginning of a syllable.

m in French and Portuguese often has the sound of *n*. See preliminary remarks.

ñ in Spanish

ñ in Polish

ŋ in Bohemian

nh in Portuguese

all have the sound of *ny* (French and Italian *gn*).

qu in French always, and in Portuguese and Spanish before *e* and *i*, is sounded like *k*.

r is almost always more strongly trilled than in English.

ř in Bohemian

rz in Polish

are both sounded like *rz*.

s in German is usually pronounced soft, like English *z*, at the beginning of a word where a vowel follows; in Hungarian it is sounded as *sh*.

ś in Polish has the sound of *sy*.

sc in Italian before *e* and *i* has the sound of *sh*. (See above under *c*.)

sch in German has the sound of *sh*, but in Dutch and Italian has that of *s* followed by the respective sounds of *ch*, in Dutch accordingly it is equivalent to *sch*, in Italian to *sk*.

sk before *e*, *i*, *j*, *y*, and the modifications of *a* and *o* is sounded in Norwegian like *sh*.

stj in Swedish when followed by a vowel has the sound of *sh*.

sz in Polish

š in Bohemian

are both sounded like *sh*.

sz in Hungarian is sounded like *s*.

t in Spanish is dental like the Spanish *d*.

th in Welsh is sounded like *th* in *thin*, in all other European languages using the Roman alphabet like the simple *t*.

tj in Swedish when followed by a vowel has the sound of *ch* in *chain*.

ts in Hungarian is sounded like *ch* in *chain*.

w in German and Dutch has a sound closely resembling that of *v* produced by bringing the lips feebly into contact, not by placing the upper teeth against the lower lip. In Welsh it has the sound of *u* or *o*.

x in Portuguese has the sound of *sh*; in old Spanish spelling it is used where *j* is now used to represent the sound of *ch*.

y is usually a vowel, but in Spanish it has also a consonantal sound like the English *y*, and the same sound is heard in Hungarian after *d*, *g*, *l*, *n*, and *t*.

z in German and Swedish has the sound of *ts*, in Italian sometimes that of *dz* sometimes that of *ts*, in Spanish that of *th* in *thin*. In Spanish America this *th*-sound usually gives place, like the *th*-sound of *c*, to that of *s* in *sing*.

ž in Polish has the sound of *zy*.

ż in Polish

ž in Bohemian and Servian

zs in Hungarian

all have the sound of *zh*.

B. Hints on the pronunciation of geographical names belonging to languages not using the Roman alphabet.

The general rule regarding the spelling of such names is to spell them in English phonetically in accordance with the prevailing sounds of the letters of the English alphabet. In such phonetic spellings, however, the vowels usually receive their continental sounds (as in *far*, *rein*, *pique*, *rule*). In Indian and some other Asiatic names and in Arabic names *a* is often used also to represent the sound of the English *u* in *but*. The vowel digraph *ai* usually represents the sound of *y* in *fly*, but sometimes (as in all Greek names) that of *a* in *fate*; *ei* most commonly that of *a* in *fate*, but sometimes that of *y* in *fly*; *au* for the most part sounds as *ow* in *now*, but in some cases as *a* in *fall*. In the spelling of Indian names this last digraph is often used where *ai* is now mostly used, the sound intended being that of *a* in *far*, or perhaps one somewhat broader. The consonants *j*, *w*, *y*, *z* have as a rule their characteristic English sounds, as in *jet*, *yet*, *well*, *zeal*; *g* usually has its hard sound as in *get*. *Ch* usually represents the sound which it has in *chain*; *gh* sometimes that of a very rough aspirate, sometimes a sound like that of the Northumberland or Berwickshire burr, sometimes, before *e* or *i*, merely the

hard sound of *g*; *kh* is the combination most frequently used to represent the sound of *ch*; and *th* usually stands for the sound which it has in *thin*, sometimes for that which it has in *then*.

In the spelling of geographical names belonging to languages which do not use the Roman alphabet (as also of those which were first put in writing by Europeans) numerous variations are found from different causes, and it will throw some light on the pronunciation to note what the principal causes of these variations are.

1. Very often the variation is due to the irregularity in the use of our own alphabet, which leads one person to represent the same sound phonetically in one way, another in another. From this cause *s* and *z* are frequently interchanged, as in *Kasan*, *Kazan*; so also are *oo*, *ou*, and *u*, where the sound of *u* in *bull* or in *rule* is intended, as in *Moorzook*, *Mourzouk*, *Muruk*, &c.; and so also are *i* and *y*, as in *Ustyansk*, *Ustiansk*; *Krasnoyarsk*, *Krasnoiarisk*. Hence likewise those names which are spelled with *a* to represent the sound of *u* in *but*, are also frequently found spelled with *u*, as in *Panjab*, *Punjab*.

2. Sometimes the variation is due to the obscurity of the sounds themselves, as where a vowel sound is so short that its exact quality can hardly be determined, as in *Bedouin*, *Bedawin*; or where a short vowel sound seems to one ear to make a separate syllable, while to another ear no such syllable seems to be heard, as in *Bassora*, *Basra*; *Wargela*, *Wargla*.

3. In other cases the variation is due to the adoption in English of a continental mode of spelling, as where *dj* is adopted from the French for *j*, as in *Djebel* for *Jebel*, or *tch* from the same language for *ch*, as in *Nertchinsk* for *Neurchinsk*, *Kamtchatka* (the common spelling) for *Kamchatka*, or *j* from the practice of most continental nations for *y*, as in *Jakutsk* for *Yakutsk*.

When the variation in spelling is due to any of these causes, a comparison of the different forms of the name will often serve as a good indication of the correct pronunciation, where any one of them might leave it doubtful; for the correct pronunciation must be more or less consistent with all the different forms. Thus when *Bassora* is also found spelled *Basra* it is clear that the correct pronunciation cannot be *Basso'ra*, and when *Bedouin* is found spelled also *Bedawin*, *Bedaween*, &c., it shows that the accents lie on the first and third syllables, and that the *i* in *Bedouin* is pronounced as *e* in *me*.

4. Other variations are due to the fact that the sounds to be represented have no signs for them in the Roman alphabet or any of its commonly used digraphs, so that different signs are adopted to represent them approximately in accordance with the conceptions of different persons. One of the chief instances of this sort is a sound existing in Arabic and Hindu resembling the Northumbrian burr. Usually this sound is represented by *gh*, but in the case of many Arabic names in North Africa it is often represented by *rh* or *r*. Thus *Ghadames* is often spelled *Rhadames*, the tribe of the *Songhay* often *Sonrhay*.

5. In other cases the variation is accounted for by differences of dialect, or different pronunciations of the same dialect in different parts of the country or region in which a particular language is spoken. In this way arise many of the varieties of spelling in Chinese, Indian, and Arabic names. In the last one of the most notable dialectal peculiarities of pronunciation is in the case of the Arab character usually sounded as *j*, but in some parts, as in Egypt, as *g* in *get*. For this reason the Arabic *Jebel* (mountain) is usually spelled in Egyptian names *Gebel*, in which *g* is intended to have its hard and not its soft sound.

6. Another cause of variation is the fact that the strict rule of phonetic spelling is sometimes departed from, and the English form of a name is partly accommodated to the spelling of the language to which it belongs, the same letter in that language being always represented by the same in English, even though the pronunciation may vary in the original language. This is frequent in Russian names, in which the sounds of *v* and *f*, those of *a* and *o*, &c., are often represented by the same letter,

and in which the Russian character representing the sound of *a* in *fate* or *e* in *met* sometimes stands for the same sound preceded by that of the consonant *y*. In this way are explained such variations as *Kief*, *Kiev*; *Semipolatsinsk*, *Semipalatinsk*; *Semiryechensk*, *Semirechensk*.

7. Lastly, the foreign spelling of a name is sometimes adopted for native names in regions out of Europe belonging politically to European powers. Thus *Sourabaya* may sometimes be seen spelled in the Dutch fashion, *Soerabaja*. In Spanish and Portuguese America this is done almost uniformly.

In Chinese the digraph *ao* represents the sound of *a* in *far* gliding into that of *o*, the whole sound closely resembling that of *ow* in *now*; *ei* represents the sound of *a* in *fate* gliding into a very short *ë*-sound (as in *me*); in *ia*, *ie*, in the sounds of *a*, *e*, *u* are preceded by a very short *i*-sound, a sound almost identical with that of the consonant *y*; *oo* (for which *u* is often used) usually represents the sound of *u* in *bull* or in *rule*, but sometimes it represents a long *o* gliding into a very short sound like that of *u* in *bull*. When *o* precedes *a* or *ei* it is sounded very short so as to be almost equivalent to the consonant *w*; hence we have such spellings as *Whangho* (or *Hwaugho*) and *Kweichoo* or *Queichoo*, as well as *Hoangho* and *Koeichoo*. The initial *ng* is a nasal, as in the word *sing* (not as in *finger*), and this initial sound is also met with in names belonging to the other monosyllabic languages of Eastern Asia, as well as in some African and New Zealand names.

In Indian, Arabic, and some other names aspirated consonants occur, and are represented in spelling by an *h* following the consonant, as in *Bhagalpur*. The proper sound of this combination is accurately represented by the letters composing it, but in the English pronunciation of such names this peculiarity is commonly disregarded.

In African words the consonant *m* used as a prefix has a shortened sound of *um*, and in the South African colonies this prefix is so spelled, as in *Umtata*, *Umtzila*, &c. By travellers in equatorial Africa, however, the simple *m* is always used, as in *Mpwapwa*. Except at the end of a word *y* is always the consonant. Lake *Nyassa*, for example, is to be pronounced as two syllables, *Nyas'sa*, not in three as *Ni-as'sa*.

For the spelling of Maori names in New Zealand the Roman alphabet was introduced by the English missionaries, but only fourteen characters are required, namely, *a, e, h, i, k, m, n, o, p, r, t, u, w*, and the nasal *ng*. The vowels have the continental sounds, and are always sounded separately, never coalescing into a proper diphthong.

In the following list showing the pronunciation of geographical names the only diacritic marks which are used are the acute, grave, and circumflex accents (´, ` ^), the modification mark (˘), the cedilla (¸), and the tilde (~); and it will be understood that, where the respelling of a name indicates the pronunciation of a diacritically marked letter not so marked in the name as given in the list, that name is spelled with a letter so marked in the language of the country to which it belongs. Thus, when it is stated that the Swedish name *Tornea* is pronounced *tor'nä-ä*, it may be inferred, in accordance with the rules just given, that in Swedish that name is spelled *Torneå*. In respelling names to indicate pronunciation the consonants, *b, d, f, h, j, k, l, m, n, p, r, t, s, v, w*, and *z*, and the digraphs *ng, nk*, and *sh* always have their usual English sounds, and *s* always has the hissing sound as in *sea*. The key-line gives the explanation of the other signs.

Note.—In consulting this List it should be kept in mind that attention to the preceding notes indicating the variations that may be looked for in the spelling of foreign names will often be of assistance to those doing so in finding the name they are in search of, since names not found under one spelling may be found under some other equivalent spelling. Thus many names not found spelled with *c, ch, z, y*, &c., may be found under the spellings *k, kh, s, j*, &c. respectively; Spanish names in *x* may be found spelled with *j*, Dutch names in *y* may be found in *ij*, German, Danish, and other names in *ae* or *oe* may be found in *ä* (sometimes *e*) or *ö*; and so forth.

j, job; *y*, yes; *th*, then; *th*, thin; *zh*, azure. French, *vûe, bûte*; *blêu, nèuf*; *n, on*. German, *ch, nacht*.
